Use the information provided to answer Part A and Part B for question 27.

Jian's family sells honey from beehives. They collected 3,311 ounces of honey from the beehives this season. They will use the honey to completely fill 4-ounce jars or 6-ounce jars.

Jian's family will sell 4-ounce jars for \$5 each or 6-ounce jars for \$8 each.

Jian says if they use only 4-ounce jars, they could make \$4,140 because $3,311 \div 4 = 827 \text{ R } 3$. That rounds up to 828, and 828 multiplied by \$5 is \$4,140.

The following pages include the answer key for all machine-scored items, followed by the rubrics for the hand-scored items.

- The rubrics show sample student responses. Other valid methods for solving the problem can earn full credit unless a specific method is required by the item.
- In items where the scores are awarded for full and partial credit, the definition of partial credit will be confirmed during range-finding (reviewing sets of real student work).
- If students make a computation error, they can still earn points for reasoning or modeling.

Reasoning component: Student gives a valid explanation of how to correct the reasoning and provides a correct comparison. <p>Sample Student Responses:</p> <p>Christy found the correct total distance of her runs, but her comparison is wrong. 0.5 is $\frac{5}{10}$ which equals $\frac{50}{100}$ so she should compare 47 to 50, not 5.</p>

	<p>50 is greater than 47, so $\frac{5}{10} > \frac{47}{100}$.</p> <p>OR</p> <p>Christy's distance $\frac{47}{100} = 0.47$ and Alex ran 0.5 mile, so she should compare 0.5 to 0.47. The 5 in tenths place in 0.5 has a greater value than the 4 in the tenths place in 0.47.</p> <p>Note: Other valid explanations are acceptable.</p>

Rico had 3 times the number of yards as Ed, so $638 \times 3 = 1914$. To find how many more yards Rico had than Ed, I subtracted 638 from 1914 and got 1276.</p> <p>Note: A variety of explanations are valid as long as the student uses a mathematically correct approach to solving the problem.</p>
2	Student response includes 2 of the 3 elements. If a computation mistake is made, credit cannot be given for the computation component, but points can be given for modeling.
