Mathematics Test Directions

On the following pages are the mathematics questions.

- You may not use a calculator for question 1. You may use a calculator for all other questions on this test.

Directions for Multiple-Choice Questions:

Some questions will ask you to select an answer from among four choices.

For the multiple-choice questions:

- First solve the problem on scratch paper.
- Choose the correct answer and record your choice in the answer booklet.
- If none of the choices matches your answer, go back and check your work for possible errors.
- Only one of the answers provided is the correct response.

Directions for Open-Ended Questions:

Some questions will require you to write your response.

For the open-ended questions:

- These questions have more than one part. Be sure to read the directions carefully.
- You cannot receive the highest score for an open-ended question without completing all tasks in the question. For example, if the question asks you to show your work or explain your reasoning, be sure to show your work or explain your reasoning in the space provided.
- If the question does **not** ask you to show your work or explain your reasoning, you may use the space provided, but only those parts of your response that the question specifically asks for will be scored.
- Write your response in the appropriate location within the response box in the answer booklet. Some answers may require graphing, plotting, labeling, drawing, or shading. If you use scratch paper, be sure to transfer your final response and any needed work or reasoning to the answer booklet.

General Description of Scoring Guidelines for Mathematics Open-Ended Questions

4— The response demonstrates a *thorough* understanding of the mathematical concepts and procedures required by the task.

The response provides correct answer(s) with clear and complete mathematical procedures shown and a correct explanation, as required by the task. Response may contain a minor “blemish” or omission in work or explanation that does not detract from demonstrating a *thorough* understanding.

3— The response demonstrates a *general* understanding of the mathematical concepts and procedures required by the task.

The response and explanation (as required by the task) are mostly complete and correct. The response may have minor errors or omissions that do not detract from demonstrating a *general* understanding.

2— The response demonstrates a *partial* understanding of the mathematical concepts and procedures required by the task.

The response is somewhat correct with *partial* understanding of the required mathematical concepts and/or procedures demonstrated and/or explained. The response may contain some work that is incomplete or unclear.

1— The response demonstrates a *minimal* understanding of the mathematical concepts and procedures required by the task.

0— The response has no correct answer and *insufficient* evidence to demonstrate any understanding of the mathematical concepts and procedures required by the task for that grade level.

Special Categories within zero reported separately:

Blank.....Blank, entirely erased, entirely crossed out, or consists entirely of whitespace

Refusal.....Refusal to respond to the task

Off Task.....Makes no reference to the item but is not an intentional refusal

Foreign Language.....Written entirely in a language other than English

IllegibleIllegible or incoherent

Question 1 in this sampler is to be solved without the use of a calculator.

MULTIPLE-CHOICE ITEMS

1. Subtract: $7\frac{1}{2} - \frac{2}{3}$

A. $2\frac{1}{6}$

B. $3\frac{5}{6}$

C. $6\frac{5}{6}$

D. $7\frac{1}{6}$

3. The chart below shows the number of rocking chairs a factory made in the first three months of a year and the number of rocking chairs that the factory shipped for each of those months.

Rocking Chair Factory

Month	Number of Rocking Chairs Made	Number of Rocking Chairs Shipped
January	4,228	2,987
February	3,165	4,000
March	3,784	3,985

How many rocking chairs that were made in the first three months of the year remain to be shipped?

- A. 201
- B. 205
- C. 1,241
- D. 2,277

8. During his free time last week, Javon read a book and played outside. At the end of each day, Javon recorded the total number of hours he had spent so far that week doing each activity. The data Javon recorded for the last four days of the week are shown in the table below.

Javon's Free Time

End of Day	Read a Book (hours)	Played Outside (hours)
Wednesday	8	12
Thursday	10	15
Friday	12	18
Saturday	14	21

Based on the patterns in the table, which statement is true?

- A. For every hour Javon read a book, he played outside for 1.5 hours.
- B. For every hour Javon played outside, he read a book for 1.5 hours.
- C. For every hour Javon read a book, he played outside for 3 hours.

OPEN-ENDED QUESTION

17. Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

- A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

Go to the next page to finish question 17.

17. Continued. Please refer to the previous page for task explanation.

Mitch decides that the next time he makes the bread dough he would use only $4\frac{1}{2}$ cups of wheat flour. He would also increase the amounts of rice flour and white flour so that the total amount of flour he used stayed the same. He plans to increase the rice flour and the white flour by the same amount.

- B.** How many cups of rice flour and white flour will Mitch use the next time he makes the bread dough? Show or explain all your work.

rice flour: _____

white flour: _____

After you have checked your work, close your answer booklet and test booklet so your teacher will know you are finished.

Item-Specific Scoring Guideline

Alignment	A-F.1	Depth of Knowledge	2	Mean Score	1.75
-----------	-------	--------------------	---	------------	------

Assessment Anchor this item will be reported under:

M05.A-F.1 — Use equivalent fractions as a strategy to add and subtract fractions.

Specific Assessment Anchor Descriptor addressed by this item:

M05.A-F.1.1 — Solve addition and subtraction problems involving fractions (straight computation or word problems).

Scoring Guide

Score	In this item, the student . . .
4	Demonstrates a thorough understanding of how to use equivalent fractions as a strategy to add and subtract fractions by correctly solving problems and clearly explaining procedures.
3	Demonstrates a general understanding of how to use equivalent fractions as a strategy to add and subtract fractions by correctly solving problems and clearly explaining procedures with only minor errors or omissions.
2	Demonstrates a partial understanding of how to use equivalent fractions as a strategy to add and subtract fractions by correctly performing a significant portion of the required task.
1	Demonstrates minimal understanding of how to use equivalent fractions as a strategy to add and subtract fractions.
0	The response has no correct answer and insufficient evidence to demonstrate any understanding of the mathematical concepts and procedures as required by the task. Response may show only information copied from the question.

Top-Scoring Student Response and Training Notes

Score	Description
4	Student earns 4 points.
3	Student earns 3.0–3.5 points.
2	Student earns 2.0–2.5 points.
1	Student earns 0.5–1.5 points. OR Student demonstrates minimal understanding of how to use equivalent fractions as a strategy to add and subtract fractions.
0	Response is incorrect or contains some correct work that is irrelevant to the skill or concept being measured.

Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

Eq

$$5\frac{1}{2} = 5\frac{6}{12}$$

$$1\frac{3}{4} = 1\frac{9}{12}$$

$$\frac{2}{3} = \frac{8}{12}$$

$$5\frac{6}{12} + 1\frac{9}{12} + \frac{8}{12} = 6\frac{23}{12} = 7\frac{11}{12}$$

Mitch uses $7\frac{11}{12}$ cups of flour.

17. Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

Work	Explain

17. **Continued.** Please refer to the previous page for task explanation.

Mitch decides that the next time he makes the bread dough he would use only $4\frac{1}{2}$ cups of wheat flour. He would also increase the amounts of rice flour and white flour so that the total amount of flour he used stayed the same. He plans to increase the rice flour and the white flour by the same amount.

B. How many cups of rice flour and white flour will Mitch use the next time he makes the bread dough? Show or explain all your work.

Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

Eq

Mitch uses $7\frac{11}{12}$ cups of flour. I got $7\frac{11}{12}$ because I added $5\frac{1}{2} + 1\frac{3}{4} + \frac{2}{3} = 7\frac{11}{12}$

17. Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

- A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

The total cups of flour is $6\frac{13}{20}$
because I add $\frac{1}{2}$, $\frac{3}{4}$, $\frac{2}{3}$ and then
I add 5 and 1.

The response provides an incorrect answer. The support is complete.

- B. How many cups of rice flour and white flour will Mitch use the next time he makes the bread dough? Show or explain all your work.

The next time when mitch makes bread dough he will put $\frac{1}{3}$ because that is just right to make bread dough.

rice flour: $\frac{2}{3}$

white flour: $\frac{3}{4}$

Both answers provided are incorrect and the support is incorrect.

Line Guide

Mitch is making some bread dough.

To make the bread dough, Mitch uses $5\frac{1}{2}$ cups of wheat flour, $1\frac{3}{4}$ cups of rice flour, and $\frac{2}{3}$ cup of white flour.

A. How many cups of flour, in total, does Mitch use? Show or explain all your work.

Eq

$$5\frac{1}{2} = \frac{11}{2} = \frac{11}{2} \times \frac{2}{2} = \frac{22}{4}$$

$$1\frac{3}{4} = \frac{12}{4}$$

$$\frac{22}{4} + \frac{12}{4} + \frac{2}{3} = \frac{25}{4}$$
