

AP[®] Calculus AB Practice Exam

From the 2016 Administration

This exam may not be posted on school or personal websites, nor electronically redistributed for any reason. This Released Exam is provided by the College Board for AP Exam preparation. Teachers are permitted to download the materials and make copies to use with their students in a classroom setting only. To maintain the security of this exam, teachers should collect all materials after their administration and keep them in a secure location.

Further distribution of these materials outside of the secure College Board site disadvantages teachers who rely on uncirculated questions for classroom testing. Any additional distribution is in violation of the College Board's copyright policies and may result in the termination of Practice Exam access for your school as well as the removal of access to other online services such as the AP Teacher Community and Online Score Reports.

(A) $-2\sin 2x$ (B) $-\sin 2x$ (C) $\sin 2x$ (D) $2\sin 2x$ (E) $2\sin x$

(E) $\frac{x^3(x^3 - 1)^{11}}{33} + C$

3. $\lim_{x \rightarrow \infty} \frac{\sqrt{9x^4 + 1}}{4x^2 + 3}$ is

4. If $y = \left(\frac{x}{x+1}\right)^5$, then $\frac{dy}{dx} =$

- 5-

A A

10. $\int (e^x + e) dx =$

- (A) $e^x + C$ (B) $2e^x + C$ (C) $e^x + e + C$ (D) $e^{x+1} + ex + C$ (E) $e^x + ex + C$

11. The graph of the function f is shown in the figure above. Which of the following could be the graph of f' , the derivative of f ?

13. $\frac{d}{dx}(\tan^{-1} x + 2\sqrt{x}) =$

- (A) $-\frac{1}{\sin^2 x} + \frac{1}{\sqrt{x}}$
- (B) $\frac{1}{\sqrt{1-x^2}} - 4\sqrt[3]{x}$
- (C) $\frac{1}{\sqrt{1-x^2}} + \frac{1}{\sqrt{x}}$
- (D) $\frac{1}{1+x^2} - 4\sqrt[3]{x}$
- (E) $\frac{1}{1+x^2} + \frac{1}{\sqrt{x}}$

14. If $y = f(x)$ is a solution to the differential equation $\frac{dy}{dx} = e^{x^2}$ with the initial condition $f(0) = 2$, which of the following is true?

(E) $f(x) = 2 + \int_2^x e^{t^2} dt$

- Unauthorized copying or reuse of
any part of this page is illegal.

20. Let h be the function defined by $h(x) = \int_{\pi/4}^x \sin^2 t \, dt$. Which of the following is an equation for the line tangent to the graph of h at the point where $x = \frac{\pi}{4}$?

- (A) $y = \frac{1}{2}$
(B) $y = \sqrt{2}x$
(C) $y = x - \frac{\pi}{4}$
(D) $y = \frac{1}{2}\left(x - \frac{\pi}{4}\right)$
(E) $y = \frac{\sqrt{2}}{2}\left(x - \frac{\pi}{4}\right)$

24. Sand is deposited into a pile with a circular base. The volume V of the pile is given by $V = \frac{r^3}{3}$, where r is the radius of the base, in feet. The circumference of the base is increasing at a constant rate of 5π feet per hour. When the circumference of the base is 8π feet, what is the rate of change of the volume of the pile, in cubic feet per hour?

25. $\lim_{h \rightarrow 0} \frac{e^{-1-h} - e^{-1}}{h}$ is

- 19-

B**B****B****B****B****B****B****B****B****CALCULUS AB****SECTION I, Part B****Time—50 minutes****Number of questions—17**

A GRAPHING CALCULATOR IS REQUIRED FOR SOME QUESTIONS ON
THIS PART OF THE EXAM.

Directions: Solve each of the following problems, using the available space for scratch work. After examining the form of the choices, decide which is the best of the choices given and fill in the corresponding circle on the answer sheet. No credit will be given for anything written in the exam book. Do not spend too much time on any one problem.

BE SURE YOU ARE USING PAGE 3 OF THE ANSWER SHEET TO RECORD YOUR ANSWERS TO QUESTIONS NUMBERED 76–92.

YOU MAY NOT RETURN TO PAGE 2 OF THE ANSWER SHEET.

In this exam:

- (1) The exact numerical value of the correct answer does not always appear among the choices given. When this happens, select from among the choices the number that best approximates the exact numerical value.
- (2) Unless otherwise specified, the domain of a function f is assumed to be the set of all real numbers x for which $f(x)$ is a real number.
- (3) The inverse of a trigonometric function f may be indicated using the inverse function notation f^{-1} or with the prefix “arc” (e.g., $\sin^{-1}x = \arcsin x$).

B**B****B****B****B****B****B****B****B**

Graph of f

76. The graph of a function f is shown above. Which of the following limits does not exist?

(A) $\lim_{x \rightarrow 1^-} f(x)$

(B) $\lim_{x \rightarrow 1^+} f(x)$

(C) $\lim_{x \rightarrow 3^-} f(x)$

(D) $\lim_{x \rightarrow 3} f(x)$

(E) $\lim_{x \rightarrow 5} f(x)$

B**B****B****B****B****B****B****B****B**

77. Let f be a function that is continuous on the closed interval $[1, 3]$ with $f(1) = 10$ and $f(3) = 18$. Which of the following statements must be true?

(A) $10 \leq f(2) \leq 18$

(B) f is increasing on the interval $[1, 3]$.

(C) $f(x) = 17$ has at least one solution in the interval $[1, 3]$.

(D) $f'(x) = 8$ has at least one solution in the interval $(1, 3)$.

(E) $\int_1^3 f(x) dx > 20$

B**B****B****B****B****B****B****B****B**

78. Let R be the region bounded by the graphs of $y = e^x$, $y = e^3$, and $x = 0$. Which of the following gives the volume of the solid formed by revolving R about the line $y = -1$?

- (A) $\pi \int_0^3 (e^3 - e^x + 1)^2 dx$
- (B) $\pi \int_0^3 (e^3 - e^x - 1)^2 dx$
- (C) $\pi \int_0^3 [(e^3 - e^x)^2 + 1] dx$
- (D) $\pi \int_0^3 [(e^3 - e^x)^2 - 1] dx$
- (E) $\pi \int_0^3 [(e^3 + 1)^2 - (e^x + 1)^2] dx$

-
79. The number of people who have entered a museum on a certain day is modeled by a function $f(t)$, where t is measured in hours since the museum opened that day. The number of people who have left the museum since it opened that same day is modeled by a function $g(t)$. If $f'(t) = 380(1.02^t)$ and $g'(t) = 240 + 240 \sin\left(\frac{\pi(t-4)}{12}\right)$, at what time t , for $1 \leq t \leq 11$, is the number of people in the museum at a maximum?

- (A) 1 (B) 7.888 (C) 9.446 (D) 10.974 (E) 11

B**B****B****B****B****B****B****B****B**

x	0	1	2	3
$f(x)$	5	2	3	6
$f'(x)$	-3	1	3	4

80. The derivative of the function f is continuous on the closed interval $[0, 4]$. Values of f and f' for selected values of x are given in the table above. If $\int_0^4 f'(t) dt = 8$, then $f(4) =$

(A) 0

(B) 3

(C) 5

(D) 10

(E) 13

B**B****B****B****B****B****B****B****B**

81. A slope field for a differential equation is shown in the figure above. If $y = f(x)$ is the particular solution to the differential equation through the point $(-1, 2)$ and $h(x) = 3x \cdot f(x)$, then $h'(-1) =$
- (A) -6 (B) -2 (C) 0 (D) 1 (E) 12

-
82. If f is a continuous function such that $f(2) = 6$, which of the following statements must be true?

- (A) $\lim_{x \rightarrow 1} f(2x) = 3$
- (B) $\lim_{x \rightarrow 2} f(2x) = 12$
- (C) $\lim_{x \rightarrow 2} \frac{f(x) - f(2)}{x - 2} = 6$
- (D) $\lim_{x \rightarrow 2} f(x^2) = 36$
- (E) $\lim_{x \rightarrow 2} (f(x))^2 = 36$

B**B****B****B****B****B****B****B****B**

83. A particle moves along a straight line with velocity given by $v(t) = 5 + e^{t/3}$ for time $t \geq 0$. What is the acceleration of the particle at time $t = 4$?

- (A) 0.422 (B) 0.698 (C) 1.265 (D) 8.794 (E) 28.381

84. A home uses fuel oil at the rate $r(t) = 10 + 8\sin\left(\frac{t}{60}\right)$ gallons per day, where t is the number of days from the beginning of the heating season. To the nearest gallon, what is the total amount of fuel oil used from $t = 0$ to $t = 60$ days?

- (A) 7 gal (B) 14 gal (C) 600 gal (D) 821 gal (E) 1004 gal

B**B****B****B****B****B****B****B****B**

85. The function f is defined on the open interval $0.4 < x < 2.4$ and has first derivative f' given by $f'(x) = \sin(x^2)$. Which of the following statements are true?

I. f has a relative maximum on the interval $0.4 < x < 2.4$.

II. f has a relative minimum on the interval $0.4 < x < 2.4$.

III. The graph of f has two points of inflection on the interval $0.4 < x < 2.4$.

(A) I only

(B) II only

(C) III only

(D) I and III only

(E) II and III only

Graph of f

86. The graph of the function f , which has a domain of $[0, 7]$, is shown in the figure above. The graph consists of a quarter circle of radius 3 and a segment with slope -1 . Let b be a positive number such that $\int_0^b f(x) \, dx = 0$.

What is the value of b ?

- (A) 3.760
- (B) 5.548
- (C) 5.659
- (D) 6.760
- (E) There is no such value of b .

B**B****B****B****B****B****B****B****B**

87. The first derivative of the function g is given by $g'(x) = \cos(\pi x^2)$ for $-0.5 < x < 1.5$. On which of the following intervals is g decreasing?

(A) $-0.5 < x < 0$

(B) $0 < x < 1$

(C) $0.707 < x < 1.225$

(D) $1.225 < x < 1.414$

(E) $1.414 < x < 1.5$

B**B****B****B****B****B****B****B****B**

88. The height above the ground of a passenger on a Ferris wheel t minutes after the ride begins is modeled by the differentiable function H , where $H(t)$ is measured in meters. Which of the following is an interpretation of the statement $H'(7.5) = 15.708$?
- (A) The Ferris wheel is turning at a rate of 15.708 meters per minute when the passenger is 7.5 meters above the ground.
- (B) The Ferris wheel is turning at a rate of 15.708 meters per minute 7.5 minutes after the ride begins.
- (C) The passenger's height above the ground is increasing by 15.708 meters per minute when the passenger is 7.5 meters above the ground.
- (D) The passenger's height above the ground is increasing by 15.708 meters per minute 7.5 minutes after the ride begins.
- (E) The passenger is 15.708 meters above the ground 7.5 minutes after the ride begins.

89. A particle moves along a straight line for 6 seconds so that its velocity, in centimeters per second, is modeled by the graph shown. During the time interval $0 \leq t \leq 6$, what is the total distance the particle travels?
- (A) 2 cm (B) 3.5 cm (C) 4 cm (D) 6.5 cm (E) 8.5 cm

B**B****B****B****B****B****B****B****B**

90. Let f be a twice-differentiable function on the open interval (a, b) . If $f'(x) > 0$ on (a, b) and $f''(x) < 0$ on (a, b) , which of the following could be the graph of f ?

B**B****B****B****B****B****B****B****B**

91. The graphs of f and g are shown above. If $h(x) = f(x)g(x)$, then $h'(6) =$

- (A) -9 (B) -7 (C) 1 (D) 7 (E) 9

92. In the xy -plane, the graph of the twice-differentiable function $y = f(x)$ is concave up on the open interval $(0, 2)$ and is tangent to the line $y = 3x - 2$ at $x = 1$. Which of the following statements must be true about the derivative of f ?

- (A) $f'(x) \leq 3$ on the interval $(0.9, 1)$.
(B) $f'(x) \geq 3$ on the interval $(0.9, 1)$.
(C) $f'(x) < 0$ on the interval $(0.9, 1.1)$.
(D) $f'(x) > 0$ on the interval $(0.9, 1.1)$.
(E) $f'(x)$ is constant on the interval $(0.9, 1.1)$.

1**1****1****1****1****1****1****1****1****1**

1. A company produces and sells chili powder. The company's weekly profit on the sale of x kilograms of chili powder is modeled by the function P given by $P(x) = 48x + 1.4x^2 - 0.05x^{2.8} - 270$, where $P(x)$ is in dollars and $0 \leq x \leq 80$.

- (a) Find the rate, in dollars per kilogram, at which the company's weekly profit is changing when it sells 32 kilograms of chili powder. Is the company's weekly profit increasing or decreasing when it sells 32 kilograms of chili powder? Give a reason for your answer.

-
- (b) How many kilograms of chili powder must the company sell to maximize its weekly profit? Justify your answer.

1**1****1****1****1****1****1****1****1****1**

- (c) The company plans to have a one-day sale on chili powder. Management estimates that t hours after the company store opens, chili powder will sell at a rate modeled by the function S given by

$S(t) = 2 + \cos\left(\frac{\pi}{10}t^2\right)$ kilograms per hour. Based on this model, estimate the amount of chili powder, in kilograms, that will be sold during the first 5 hours of the sale.

-
- (d) Using the function S from part (c), find the value of $S'(3)$. Interpret the meaning of this value in the context of the problem.

t (weeks)	0	3	6	10	12
$G(t)$ (games per week)	160	450	900	2100	2400

2. A store tracks the sales of one of its popular board games over a 12-week period. The rate at which games are being sold is modeled by the differentiable function G , where $G(t)$ is measured in games per week and t is measured in weeks for $0 \leq t \leq 12$. Values of $G(t)$ are given in the table above for selected values of t .
- (a) Approximate the value of $G'(8)$ using the data in the table. Show the computations that lead to your answer.

-
- (b) Approximate the value of $\int_0^{12} G(t) dt$ using a right Riemann sum with the four subintervals indicated by the table. Explain the meaning of $\int_0^{12} G(t) dt$ in the context of this problem.

- (c) One salesperson believes that, starting with 2400 games per week at time $t = 12$, the rate at which games will be sold will increase at a constant rate of 100 games per week per week. Based on this model, how many total games will be sold in the 8 weeks between time $t = 12$ and $t = 20$?

-
- (d) Another salesperson believes the best model for the rate at which games will be sold in the 8 weeks between time $t = 12$ and $t = 20$ is $M(t) = 2400e^{-0.01(t-12)^2}$ games per week. Based on this model, how many total games, to the nearest whole number, will be sold during this period?

AP[®] CALCULUS AB
2016 SCORING GUIDELINES

Question 1

A company produces and sells chili powder. The company's weekly profit on the sale of x kilograms of chili powder is modeled by the function P given by $P(x) = 48x + 1.4x^2 - 0.05x^{2.8} - 270$, where $P(x)$ is in dollars and $0 \leq x \leq 80$.

- (a) Find the rate, in dollars per kilogram, at which the company's weekly profit is changing when it sells 32 kilograms of chili powder. Is the company's weekly profit increasing or decreasing when it sells 32 kilograms of chili powder? Give a reason for your answer.
- (b) How many kilograms of chili powder must the company sell to maximize its weekly profit? Justify your answer.
- (c) The company plans to have a one-day sale on chili powder. Management estimates that t hours after the company store opens, chili powder will sell at a rate modeled by the function S given by $S(t) = 2 + \cos\left(\frac{\pi}{10}t^2\right)$ kilograms per hour. Based on this model, estimate the amount of chili powder, in kilograms, that will be sold during the first 5 hours of the sale.
- (d) Using the function S from part (c), find the value of $S'(3)$. Interpret the meaning of this value in the context of the problem.

- (a) $P'(32) = 65.920$
 Since $P'(32) > 0$, the company's profit is increasing when it sells 32 kilograms of chili powder.

- (b) $P'(x) = 48 + 2.8x - 0.14x^{1.8} = 0$ when $x = 58.358152$

x	$P(x)$
0	-270
58.358152	2893.04
80	1873.32

The company must sell 58.358 kilograms of chili powder to maximize its profit.

- (c) Based on this model, the estimate, in kilograms, is $\int_0^5 S(t) dt = 11.433$ (or 11.432).

- (d) $S'(3) = -0.582$

The rate of sale of chili powder is decreasing at a rate of 0.582 kilogram per hour per hour at time $t = 3$ hours.

Question 2

t (weeks)	0	3	6	10	12
$G(t)$ (games per week)	160	450	900	2100	2400

A store tracks the sales of one of its popular board games over a 12-week period. The rate at which games are being sold is modeled by the differentiable function G , where $G(t)$ is measured in games per week and t is measured in weeks for $0 \leq t \leq 12$. Values of $G(t)$ are given in the table above for selected values of t .

- (a) Approximate the value of $G'(8)$ using the data in the table. Show the computations that lead to your answer.
- (b) Approximate the value of $\int_0^{12} G(t) dt$ using a right Riemann sum with the four subintervals indicated by the table. Explain the meaning of $\int_0^{12} G(t) dt$ in the context of this problem.
- (c) One salesperson believes that, starting with 2400 games per week at time $t = 12$, the rate at which games will be sold will increase at a constant rate of 100 games per week per week. Based on this model, how many total games will be sold in the 8 weeks between time $t = 12$ and $t = 20$?
- (d) Another salesperson believes the best model for the rate at which games will be sold in the 8 weeks between time $t = 12$ and $t = 20$ is $M(t) = 2400e^{-0.01(t-12)^2}$ games per week. Based on this model, how many total games, to the nearest whole number, will be sold during this period?

(a) $G'(8) \approx \frac{G(10) - G(6)}{10 - 6} = \frac{2100 - 900}{10 - 6} = 300$ games per week per week

1 : approximation

(b) $\int_0^{12} G(t) dt \approx 3 \cdot G(3) + 3 \cdot G(6) + 4 \cdot G(10) + 2 \cdot G(12)$
 $= 3 \cdot 450 + 3 \cdot 900 + 4 \cdot 2100 + 2 \cdot 2400$
 $= 17250$
 $\int_0^{12} G(t) dt$ represents the total number of games sold over the
 12-week period $0 \leq t \leq 12$.

3 : $\begin{cases} 1 : \text{right Riemann sum} \\ 1 : \text{approximation} \\ 1 : \text{explanation} \end{cases}$

(c) The rate of sales of the game for $12 \leq t \leq 20$ is
 $R(t) = 2400 + 100(t - 12)$.
 Based on this model, the total number of games that will be sold
 between time $t = 12$ and $t = 20$ is $\int_{12}^{20} R(t) dt = 22400$.

3 : $\begin{cases} 1 : \text{rate function} \\ 1 : \text{integral} \\ 1 : \text{answer} \end{cases}$

(d) $\int_{12}^{20} M(t) dt = 15784.07655$

Based on this model, the total number of games that will be sold
 between time $t = 12$ and $t = 20$ is 15784.

2 : $\begin{cases} 1 : \text{integral} \\ 1 : \text{answer} \end{cases}$

Question 3

The function f is defined on the interval $-5 \leq x \leq c$, where $c > 0$ and $f(c) = 0$. The graph of f , which consists of three line segments and a quarter of a circle with center $(-3, 0)$ and radius 2, is shown in the figure above.

Graph of f

- (a) Find the average rate of change of f over the interval $[-5, 0]$. Show the computations that lead to your answer.
- (b) For $-5 \leq x \leq c$, let g be the function defined by $g(x) = \int_{-1}^x f(t) dt$. Find the x -coordinate of each point of inflection of the graph of g . Justify your answer.
- (c) Find the value of c for which the average value of f over the interval $-5 \leq x \leq c$ is $\frac{1}{2}$.
- (d) Assume $c > 3$. The function h is defined by $h(x) = f\left(\frac{x}{2}\right)$. Find $h'(6)$ in terms of c .

- (a) The average rate of change of f over the interval $[-5, 0]$ is

$$\frac{f(0) - f(-5)}{0 - (-5)} = \frac{2}{5}.$$

- (b) $g'(x) = f(x)$

The graph of g has a point of inflection at $x = -3$ because $g' = f$ changes from decreasing to increasing at this point.

The graph of g has a point of inflection at $x = 0$ because $g' = f$ changes from increasing to decreasing at this point.

- (c) $\frac{1}{c+5} \int_{-5}^c f(x) dx = \frac{1}{2}$

$$\frac{1}{c+5}(-\pi + (-1) + 2 + c) = \frac{1}{2}$$

$$c = 3 + 2\pi$$

- (d) $h'(x) = \frac{1}{2} f'\left(\frac{x}{2}\right)$

$$h'(6) = \frac{1}{2} f'(3) = \frac{1}{2} \cdot \frac{-2}{c} = -\frac{1}{c}$$

1 : answer

3 : $\begin{cases} 1 : g'(x) = f(x) \\ 1 : \text{identifies } x = -3 \text{ and } x = 0 \\ 1 : \text{justification} \end{cases}$

3 : $\begin{cases} 1 : \text{integral} \\ 1 : \text{equation} \\ 1 : \text{answer} \end{cases}$

2 : $\begin{cases} 1 : h'(x) \\ 1 : \text{answer} \end{cases}$

Question 4

Let S be the shaded region in the first quadrant bounded above by the horizontal line $y = 3$, below by the graph of $y = 3 \sin x$, and on the left by the vertical line $x = k$, where $0 < k < \frac{\pi}{2}$, as shown in the figure above.

- (a) Find the area of S when $k = \frac{\pi}{3}$.
- (b) The area of S is a function of k . Find the rate of change of the area of S with respect to k when $k = \frac{\pi}{6}$.
- (c) Region S is revolved about the horizontal line $y = 5$ to form a solid. Write, but do not evaluate, an expression involving one or more integrals that gives the volume of the solid when $k = \frac{\pi}{4}$.

(a)
$$\text{Area} = \int_{\pi/3}^{\pi/2} (3 - 3 \sin x) dx = \left[3x + 3 \cos x \right]_{\pi/3}^{\pi/2}$$

$$= 3 \left[\left(\frac{\pi}{2} + 0 \right) - \left(\frac{\pi}{3} + \frac{1}{2} \right) \right] = \frac{\pi}{2} - \frac{3}{2}$$

3 : $\begin{cases} 1 : \text{integrand} \\ 1 : \text{antiderivative} \\ 1 : \text{answer} \end{cases}$

- (b) Let $A(k)$ be the area of S .

$$A(k) = \int_k^{\pi/2} (3 - 3 \sin x) dx$$

$$A'(k) = -3 + 3 \sin k$$

$$A'\left(\frac{\pi}{6}\right) = -3 + 3 \sin\left(\frac{\pi}{6}\right) = -\frac{3}{2}$$

3 : $\begin{cases} 1 : \text{expression for area} \\ 1 : \text{expression for } A'(k) \\ 1 : \text{answer} \end{cases}$

(c)
$$\text{Volume} = \pi \int_{\pi/4}^{\pi/2} \left[(5 - 3 \sin x)^2 - (5 - 3)^2 \right] dx$$

$$= \pi \int_{\pi/4}^{\pi/2} \left[(5 - 3 \sin x)^2 - 4 \right] dx$$

3 : $\begin{cases} 2 : \text{integrand} \\ 1 : \text{limits and constant} \end{cases}$

Question 5

For $0 \leq t \leq 24$ hours, the temperature inside a refrigerator in a kitchen is given by the function W that satisfies the differential equation $\frac{dW}{dt} = \frac{3 \cos t}{2W}$. $W(t)$ is measured in degrees Celsius ($^{\circ}\text{C}$), and t is measured in hours. At time $t = 0$ hours, the temperature inside the refrigerator is 3°C .

- (a) Write an equation for the line tangent to the graph of $y = W(t)$ at the point where $t = 0$. Use the equation to approximate the temperature inside the refrigerator at $t = 0.4$ hour.
- (b) Find $y = W(t)$, the particular solution to the differential equation with initial condition $W(0) = 3$.
- (c) The temperature in the kitchen remains constant at 20°C for $0 \leq t \leq 24$. The cost of operating the refrigerator accumulates at the rate of \$0.001 per hour for each degree that the temperature in the kitchen exceeds the temperature inside the refrigerator. Write, but do not evaluate, an expression involving an integral that can be used to find the cost of operating the refrigerator for the 24-hour interval.

(a) $\left. \frac{dW}{dt} \right|_{(t,W)=(0,3)} = \frac{3 \cos 0}{2(3)} = \frac{1}{2}$

An equation for the tangent line is $y = \frac{1}{2}t + 3$.

$$W(0.4) \approx \frac{1}{2}(0.4) + 3 = 3.2^{\circ}\text{C}$$

(b) $2W \, dW = 3 \cos t \, dt$

$$\int 2W \, dW = \int 3 \cos t \, dt$$

$$W^2 = 3 \sin t + C$$

$$3^2 = 3 \sin 0 + C \Rightarrow C = 9$$

$$W^2 = 3 \sin t + 9$$

$$\text{Since } W(0) = 3, \, W = \sqrt{3 \sin t + 9} \text{ for } 0 \leq t \leq 24.$$

(c) $0.001 \int_0^{24} (20 - W(t)) \, dt$ dollars

$$2 : \begin{cases} 1 : \text{tangent line equation} \\ 1 : \text{approximation} \end{cases}$$

$$5 : \begin{cases} 1 : \text{separation of variables} \\ 2 : \text{antiderivatives} \\ 1 : \text{constant of integration} \\ \quad \text{and uses initial condition} \\ 1 : \text{solves for } W \end{cases}$$

Note: max 3/5 [1-2-0-0] if no constant of integration

Note: 0/5 if no separation of variables

$$2 : \begin{cases} 1 : \text{integrand} \\ 1 : \text{limits and constant} \end{cases}$$

Question 6

$$f(x) = \begin{cases} 10 - 2x - x^2 & \text{for } x \leq 1 \\ 3 + 4e^{x-1} & \text{for } x > 1 \end{cases}$$

Let f be the function defined above.

- (a) Is f continuous at $x = 1$? Why or why not?
- (b) Find the absolute minimum value and the absolute maximum value of f on the closed interval $-2 \leq x \leq 2$. Show the analysis that leads to your conclusion.
- (c) Find the value of $\int_0^2 f(x) \, dx$.

(a) $\lim_{x \rightarrow 1^-} f(x) = \lim_{x \rightarrow 1^-} (10 - 2x - x^2) = 7$

$$\lim_{x \rightarrow 1^+} f(x) = \lim_{x \rightarrow 1^+} (3 + 4e^{x-1}) = 7$$

Therefore, $\lim_{x \rightarrow 1} f(x) = 7$.

Since $\lim_{x \rightarrow 1} f(x) = f(1)$, f is continuous at $x = 1$.

(b) For $x < 1$, $f'(x) = -2 - 2x$.

$$f'(x) = 0 \Rightarrow x = -1$$

For $x > 1$, $f'(x) = 4e^{x-1} \neq 0$.

At $x = 1$, $f'(x)$ is not defined.

x	$f(x)$
-2	10
-1	11
1	7
2	$3 + 4e$

The absolute minimum value of f on the interval $-2 \leq x \leq 2$ is 7. The absolute maximum value of f on the interval $-2 \leq x \leq 2$ is $3 + 4e$.

(c) $\int_0^2 f(x) \, dx = \int_0^1 (10 - 2x - x^2) \, dx + \int_1^2 (3 + 4e^{x-1}) \, dx$

$$= \left[10x - x^2 - \frac{1}{3}x^3 \right]_0^1 + \left[3x + 4e^{x-1} \right]_1^2$$

$$= \left(10 - 1 - \frac{1}{3} \right) + [(6 + 4e) - (3 + 4)]$$

$$= \frac{23}{3} + 4e$$

$$2 : \begin{cases} 1 : \text{considers one-sided limits} \\ 1 : \text{answer with explanation} \end{cases}$$

$$4 : \begin{cases} 1 : \frac{d}{dx}(10 - 2x - x^2) \text{ and } \frac{d}{dx}(3 + 4e^{x-1}) \\ 1 : \text{identifies } x = -1 \text{ and } x = 1 \text{ as critical points} \\ 1 : \text{evaluates } f \text{ at endpoints} \\ 1 : \text{answers with analysis} \end{cases}$$
